Dear Hiring Manager,

I am writing to express my strong interest in the **Principal Software Engineer, AI Engineering** role at **Okta**. With over 20 years of hands-on software engineering experience across Banking, Insurance, and Health — and the last several years spent building enterprise agentic and AI-powered systems — I am energized by Okta's mission to secure every identity, from AI to human, and to build the trusted infrastructure that lets organizations embrace AI safely. Building secure, enterprise-grade AI agents is exactly the work I have been doing, and exactly where I want to go deeper.

As a Forward Deployed Engineer and hands-on solution architect at GSK, I deliver production-grade AI applications end to end — from architecture and design through implementation, deployment, and operational excellence. Most relevant to this role, I have taken enterprise agentic and model-driven AI from prototype to secure, scalable production: a multi-agent platform built on **LangGraph / LangChain** with real-time **tool calling**, **RAG** knowledge pipelines, and custom agents behind an **MCP server** — all routed through a governed **LLM/API gateway** for access, cost, and policy control.

A few highlights that map directly to what you are building:

- **Agentic AI & LLM orchestration** — Designed multi-agent orchestration (LangGraph / LangChain) with RAG pipelines, streaming responses, and prompt engineering, powering user-facing conversational AI experiences across web and enterprise surfaces.
- **Full-stack, production-grade delivery** — Built backend services in Python and Node.js with React front-ends, on microservices and API Gateway architectures across Azure (PaaS, AKS, Functions), AWS, and GCP, applying modern API, CI/CD, and Kubernetes practices.
- **Observability & operational excellence** — Instrumented end-to-end LLM observability (distributed tracing, evaluation, prompt versioning, and token/cost monitoring), raising reliability, quality, and cost efficiency to enterprise-grade standards.
- **Secure, governed AI** — Delivered AI in regulated (GxP / SOX) environments behind a governed gateway with policy, access, and cost controls — aligning with Okta's security-first approach to AI adoption.

Beyond the technology, I bring a consulting mindset, strong stakeholder management, and a track record of mentoring engineers and setting technical direction across distributed, cross-geo teams. Okta's focus on secure, enterprise-grade AI agents is precisely where I have been investing my expertise, and I would welcome the chance to bring that to your global AI Engineering team.

Thank you for your consideration. I would be glad to discuss how my experience aligns with your goals.

Warm regards,

Balachandar Ramalingam
